

# Welcome To Amar Enterprises

Amar Enterprises is your trusted partner in comprehensive IT solutions.

# About Amar Enterprises

We are a team of dedicated IT Professionals having vast experience of Consulting, sourcing and Servicing IT Infrastructure products for corporate clients.

We believe that quality is an attitude. Our team works in partnership with clients and do business to earn profit as well as trust.

We deliver products from the best international OEM's. Our commitment to focused innovation allows our customers to do more with less. We bring it all together through services, support and consulting, delivering a world-class experience to your business. Our efficient team of engineers help our client in infrastructure implementation and providing services of system Integration, helping them to reduce the complexities in their business.

# Vision

**Vision:** To be a leading integrated IT Services provider by creating value for people through delightful and innovative high quality services.

**Mission:** To earn trust and profit by selling IT Solutions to growing companies

**Culture:** Nurturing talent and providing equal opportunity to develop together. Growing with team work, collaboration, cooperation, partnership, discipline and training.

# Provide IT Services and Solution

- Computer AMC
- Data Centre Designing
- Server Storage & Backup
- End User Computing
- Networking( Active & passive)
- Network Security(firewall & UTM)
- Virtualization
- Infrastructure Modernization
- Audio/Video Conferencing
- CCTV surveillance

# Computer AMC

We provide our excellent services to our clients in compliance with their requirement. Our service is rendered for both the Government and the Private sectors. The skilled professional at work provide high quality maintenance services as per the industrial standards.

Our services including sales of assembled and branded computer, Network Cabling, Wi-Fi Installation, Firewall Installation, Data Security solutions, Computer Hardware Maintenance, Anti-Virus Solutions.

Onsite Computer Repairs for homes and business

Remote support and Software Assistance

Emergency Hard Drive Data Recovery

Onsite Virus removal / Firewall Protection

Firewall and Virus Protection

Spyware shields, Pop-Up Blockers

System Restoration

General Maintenance

DSL Configuration

# Data Center Design, Modification & Implementation

- Data center designing & implementation.

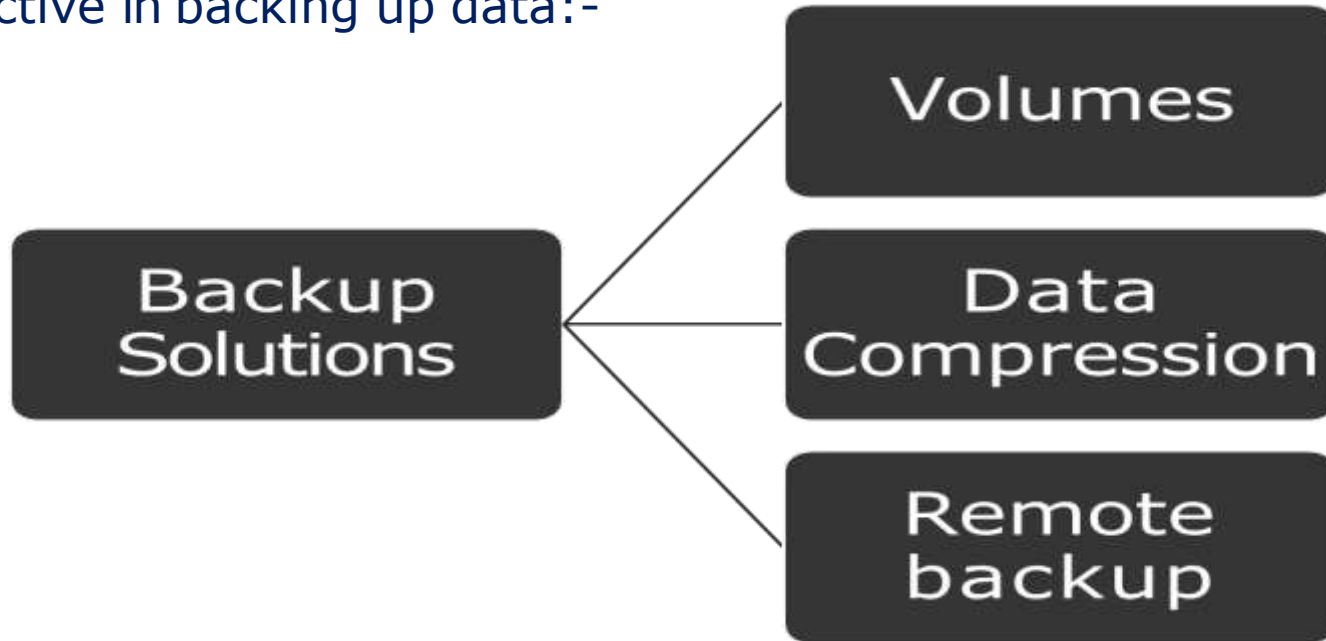

Highly secure, fault-resistant facilities housing equipment that connect to telecommunications networks. The facilities accommodate servers, switches, routers, modem racks. Data centers support corporate data bases, web sites and provide locations for CLECs, ISPs, ASPs, Web hosting companies, DSL providers and other IT services.

- Overview:-

- What equipment will the data center contain?
- What will be the RLU definitions?
- What are the required utility feeds?
- How many RLUs will be needed?
- What are the limiting factors?

# Server Storage & Backup

There are several features of backup software that make it more effective in backing up data:-

## Volumes:

Creating volumes or partitioning the storage allows the ability to compress and split backup data into separate parts for storage on smaller, removable media such as CD/DVD's, USB drive or external hard drives.

## Data Compression:

Since hard drive space has cost, compressing the data will reduce the size allowing for less drive space to be used to save money.

## Remote backup:

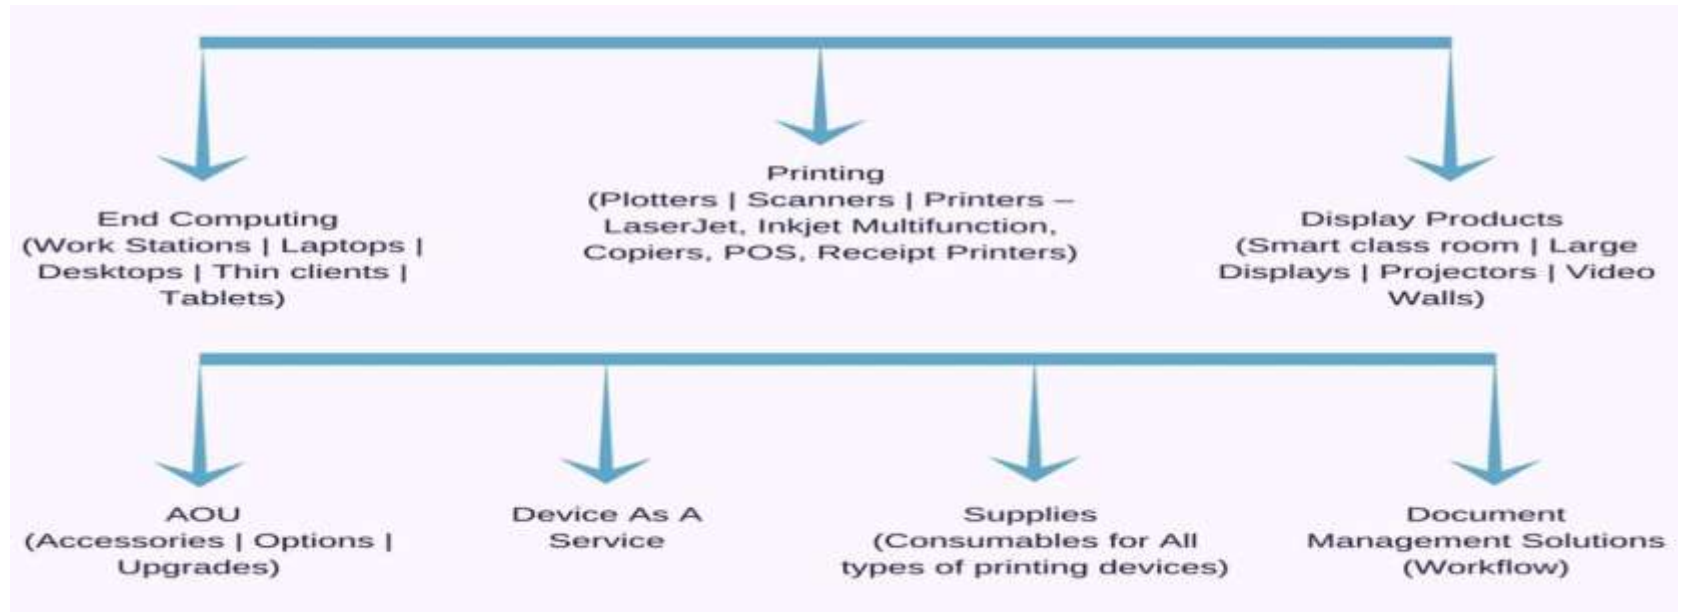

It is serving this growing market with next-generation backup technologies that automatically back up data to offsite data centers (sometimes called vaults) via the internet. Many banks, stock exchange, and other large institutions often do this to ensure data integrity.

# End User Computing

## Our End Computing Solutions

## Networking Solutions (Active & passive)

Your network is the backbone of your IT infrastructure. A network is a collection of computers, servers, mainframes, network devices, peripherals, or other devices connected to one another to allow the sharing of data.

An excellent example of a network is the Internet, which connects millions of people all over the world.

# Network Security

The Information Technology Services (ITS) Firewall service will provide you with cost-effective, practical, real-world protection and prevention for your LAN, securing the network from external attacks and internal abuses. Amar Enterprises does this work for you making your servers safe and secure.

# Virtualization:

We, at Amar Enterprises provides virtualization as solution in all the areas below. Our approach towards virtualization is comprehensive plan for the entire IT Setup and execution can be implemented in phases as per the need of the organization. This helps organizations to leverage and benefit from this technology in totality and reduces overall operational cost and provides for a better IT infrastructure management.

Server  
Virtualization

Desktop

# IT Hardware and Software Support

Amar Enterprises offer superior products in hardware and networking segment, through strategic collaboration with leading IT Technology leaders like, HP, Dell, IBM, Microsoft, Cisco, Lenovo, TCS, Cyberoam, Sonicwall, Quick Heal, Trend Micro, Manage Engine. Our strong base of technical knowledge, professional approach and proper understanding of client's requirement provide us an unparalleled edge.

Performance and efficiency with values is our top priority and as a result our products ensure high scalability and efficiency. Our wide range products make us strong to meet individual business requirements.

# Our Products range include

Server

Desktops/  
Workstation

Storage

Laptops

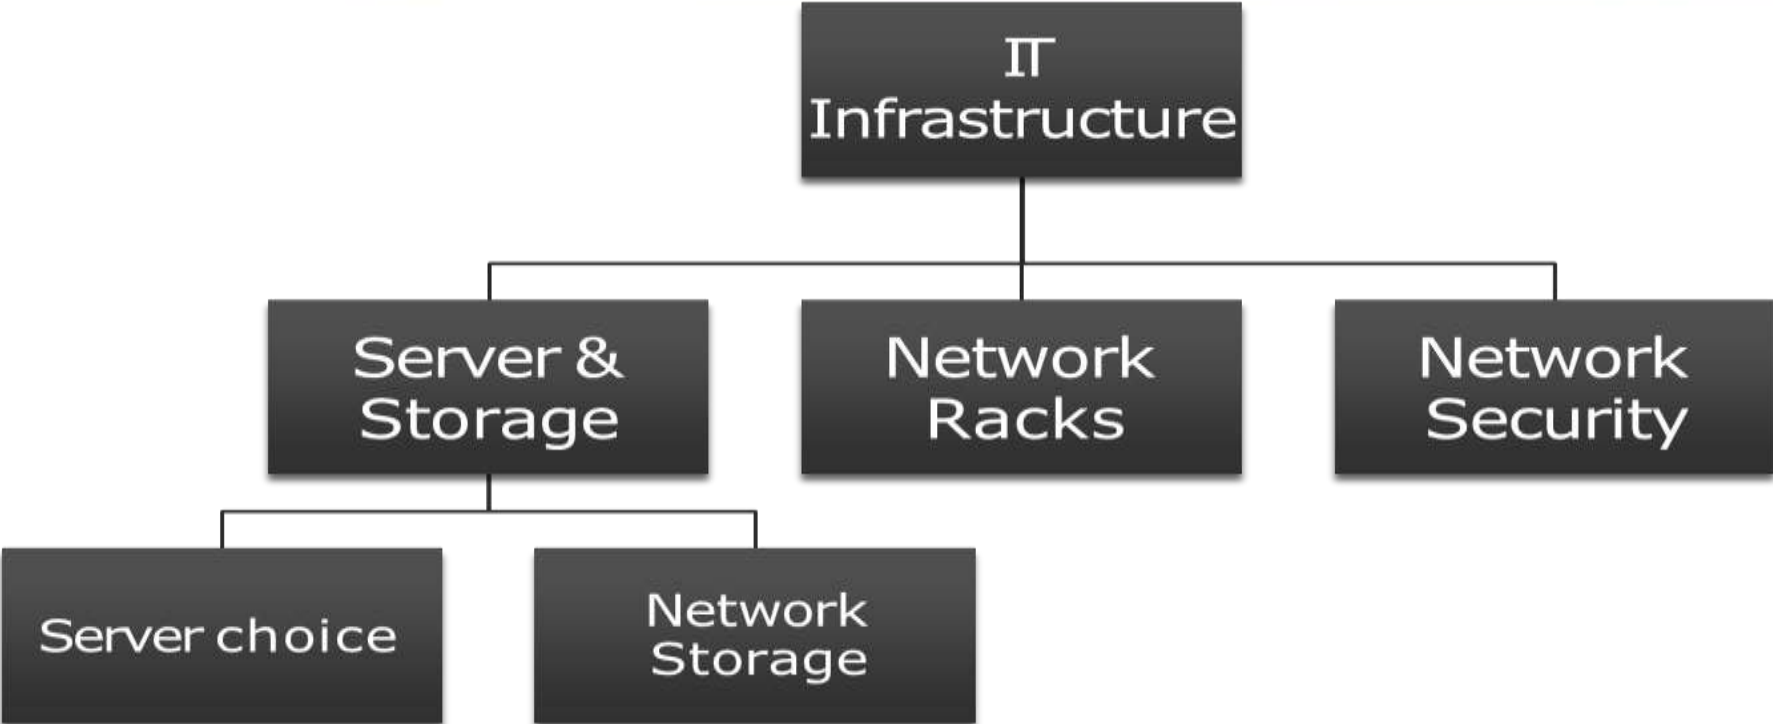

Networking Switches and Routers

# IT Infrastructure

# Server & Storage:

## Your Server Your Choice: -

Amar Enterprises offers its own line of high performance server for small to medium-sized business. Each Server is customized to meet the needs of the individual business, taking into consideration application demands and environmental conditions.

## Network Storage: -

Our remote storage solutions are plug and pay for all platforms. Connect it to your network and start taking advantage of its advanced design and capacity. We can help you analyze your requirements and produce exactly what you need.

We offer the following Infrastructure Solutions

Database  
Application  
Servers

Mail Servers

Secure Web  
Servers

Network  
Storage

DNS Servers

Intranet  
Servers

Firewalls

Virtual Private  
Network  
(VPN)
